

Assignment – 01

Problem-1:

Ans-a ->

1. Use **cd** command, this will redirect you to home directory.
2. Use **ls** command to list all the directories present in the home directory.
3. As LinuxAssignment directory isn't present, we need to create it using command: **mkdir LinuxAssignment**
4. Use **cd** command to go into the newly created directory.

```
cdac@SHRIRAM:~$ cd
cdac@SHRIRAM:~$ ls
feb25
cdac@SHRIRAM:~$ mkdir LinuxAssignment
cdac@SHRIRAM:~$ ls
LinuxAssignment feb25
cdac@SHRIRAM:~$ |
```

Ans-b ->

1. Use **cd LinuxAssignment** to move into LinuxAssignment directory.
2. Use **touch file1.txt** command to create a new file.
3. With help of **cat** command, try to display the contents of file1.txt. No contents will be seen as touch command creates an empty file. We can write anything in it by using nano editor.

```
cdac@SHRIRAM:~$ cd LinuxAssignment
cdac@SHRIRAM:~/LinuxAssignment$ touch file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ cat file1.txt
```

Ans-c ->

1. Use **mkdir** command to create a new directory named docs.
2. Use **ls** command to list the contents of LinuxAssignment directory.

```
cdac@SHRIRAM:~/LinuxAssignment$ mkdir docs
cdac@SHRIRAM:~/LinuxAssignment$ ls
docs  file1.txt
```

Ans-d ->

1. Use **cp** command to copy the file file1.txt to another directory.
2. Once the file is copied into another directory, use **mv** command to rename file1.txt to file2.txt.

```
cdac@SHRIRAM:~/LinuxAssignment$ ls
docs  file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ cp file1.txt docs
cdac@SHRIRAM:~/LinuxAssignment$ cd docs
cdac@SHRIRAM:~/LinuxAssignment/docs$ ls
file1.txt
cdac@SHRIRAM:~/LinuxAssignment/docs$ mv file1.txt file2.txt
cdac@SHRIRAM:~/LinuxAssignment/docs$ ls
file2.txt
```

Ans-e ->

1. Use **chmod u+wx** command to allocate read, write, and execute permissions to the current user.
2. Use **chmod u+r** command to allocate read permissions to other users.
3. Use **chown** command to assign the ownership of file2.txt to the user.

```
cdac@SHRIRAM:~/LinuxAssignment/docs$ chmod u+wx file2.txt
cdac@SHRIRAM:~/LinuxAssignment/docs$ chmod o+r file2.txt
cdac@SHRIRAM:~/LinuxAssignment/docs$ chown cdac file2.txt
```

Ans-f ->

1. Use **cd** command to go to home directory.
2. Then use **ls** command to list the contents of home directory.
3. Change the directory to LinuxAssignment with the help of **cd** command.
4. List the contents of LinuxAssignment directory by again using the **cd** command.
5. Change the directory to docs with the help of **cd** command.
6. List the contents of docs directory by again using the **cd** command.

```
cdac@SHRIRAM:~$ ls
LinuxAssignment  feb25
cdac@SHRIRAM:~$ cd LinuxAssignment
cdac@SHRIRAM:~/LinuxAssignment$ ls
docs  file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ cd docs
cdac@SHRIRAM:~/LinuxAssignment/docs$ ls
file2.txt
```

Ans-g.a ->

1. Use **cd** command to change the directory to home directory
2. Use command **find . -type f -name "*.txt"** to search the for all files with the extension ".txt" in the current directory and its subdirectories.

```
cdac@SHRIRAM:~$ cd
cdac@SHRIRAM:~$ find . -type f -name "*.txt"
./feb25/DEMO/abc.txt
./LinuxAssignment/docs/file2.txt
./LinuxAssignment/file1.txt
```

Ans-g.b ->

1. Use **cd** command to change the directory to directory containing target text file.
2. In order to get some output, add some text in the file using nano editor.
3. Use command **grep -i "Hello" file1.txt** to display lines containing a specific word (Hello) in a file (file1.txt).

```
cdac@SHRIRAM:~$ cd LinuxAssignment
cdac@SHRIRAM:~/LinuxAssignment$ grep -i "Hello" file1.txt
Hello, my name is Shriram.
Hello, This is fun.
Hello
cdac@SHRIRAM:~/LinuxAssignment$ grep "Hello" file1.txt
Hello, my name is Shriram.
Hello, This is fun.
Hello
```

Ans-h ->

1. Use **date** command to display the current system date and time.

```
cdac@SHRIRAM:~$ date
Wed Feb 26 17:41:19 UTC 2025
cdac@SHRIRAM:~$ |
```

Ans-i ->

1. Use **hostname -I** command to display the current system date and time.
2. Use **ping** command to Ping a remote server (google.com) to check connectivity. Use

```

cdac@SHRIRAM:~$ hostname -I
192.168.178.152
cdac@SHRIRAM:~$ ping -c 10 www.google.com
PING www.google.com (142.250.71.100) 56(84) bytes of data.
64 bytes from pnbomb-ad-in-f4.1e100.net (142.250.71.100): icmp_seq=1 ttl=111 time=545 ms

cdac@SHRIRAM:~$ |

```

Ans-j ->

1. Use **tar -cvzf "Docs.gz" docs/** command to compress the docs directory into file "Docs.gz".
2. Use **ls** command to display the contents of current directory.
3. Use **mkdir new** command to create a directory with name "new".
4. Then, use command **tar -xzf "Docs.zip" -C new/** to extract the contents of Docs.zip into new/ directory.
5. Finally use **ls** command to see the results.

```

cdac@SHRIRAM:~/LinuxAssignment$ ls
docs  file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ tar -cvzf "Docs.gz" docs/
docs/
docs/file2.txt
cdac@SHRIRAM:~/LinuxAssignment$ ls
Docs.gz  docs  file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ mkdir compressdemo
cdac@SHRIRAM:~/LinuxAssignment$ ls
Docs.gz  compressdemo  docs  file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ tar -xzf "Docs.gz" -C compressdemo/
cdac@SHRIRAM:~/LinuxAssignment$ ls
Docs.gz  compressdemo  docs  file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ cd compressdemo
cdac@SHRIRAM:~/LinuxAssignment/compressdemo$ ls
docs
cdac@SHRIRAM:~/LinuxAssignment/compressdemo$ |

```

Ans-k.a ->

1. Open the directory containing target file using **cd** command,
2. Use **nano target_file.txt** command to open nano editor to add few contents in it.

```
cdac@SHRIRAM:~$ cd LinuxAssignment
cdac@SHRIRAM:~/LinuxAssignment$ ls
Docs.gz compressdemo docs file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ nano file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ |
```

```
GNU nano 7.2 file1.txt *
Hello, my name is Shriram.
I like coding, bird watching and gaming.
Hello, This is fun.
Have a nice day.
Hi
Hello
Dummy line
```

Ans-k.b ->

1. Use the command **sed -i "s/Hello/Hi /g" file1.txt** to substitute the word Hello with Hi in target file (file1.txt).
2. -i indicates the shell to ignore case distinction, s represents the substitution and g indicates the shell to replace all occurrences in each line.

```
cdac@SHRIRAM:~/LinuxAssignment$ sed -i "s/Hello/Hi /g" file1.txt
cdac@SHRIRAM:~/LinuxAssignment$ cat file1.txt
Hi, my name is Shriram.
I like coding, bird watching and gaming.
Hi, This is fun.
Have a nice day.
Hi
Hi
Dummy line
cdac@SHRIRAM:~/LinuxAssignment$ |
```

Problem-2:

Ans-a ->

1. Use nano command to create a file called data.txt containing several lines in it.
2. Use **head data.txt** command to display first 10 lines of file "data.txt"

```
cdac@SHRIRAM:~/LinuxAssignment$ nano data.txt
cdac@SHRIRAM:~/LinuxAssignment$ head data.txt
Line 1
Line 2
Line 3
Line 4
Line 5
Line 6
Line 7
Line 8
Line 9
Line 10
```

Ans-b ->

1. Use **tail data.txt** command to display last 10 lines of file "data.txt"

```
cdac@SHRIRAM:~/LinuxAssignment$ tail -5 data.txt
Line 7
Line 8
Line 9
Line 10
Line 11
cdac@SHRIRAM:~/LinuxAssignment$ |
```

Ans-c ->

1. Use nano command to create a file called numbers.txt containing several number lines in it.
2. Use **head -15 numbers.txt** command to display first 15 lines of file “data.txt”

```
cdac@SHRIRAM:~/LinuxAssignment$ nano numbers.txt
cdac@SHRIRAM:~/LinuxAssignment$ head -15 numbers.txt
1
2
3
4
5
6
7
8
9
10
11
12
13
14
15
cdac@SHRIRAM:~/LinuxAssignment$ |
```

Ans-d ->

1. Use **head -3 numbers.txt** command to display first 3 lines of file “number.txt”

```
cdac@SHRIRAM:~/LinuxAssignment$ tail -3 numbers.txt
48
49
50
```

Ans-e ->

1. Use **nano** command to create a file named input.txt and put some textual content in it.
2. Use **tr 'a-z' 'A-Z' <input.txt> output.txt** command to convert the content of input.txt to upper case and store it in new file (output.txt).

```
cdac@SHRIRAM:~/LinuxAssignment$ nano input.txt
cdac@SHRIRAM:~/LinuxAssignment$ tr 'a-z' 'A-Z' < input.txt > output.txt
cdac@SHRIRAM:~/LinuxAssignment$ cat input.txt
Hard work is the foundation of success.
It means staying dedicated, pushing through challenges, and putting in the effort
even when things get tough. While talent helps, persistence and consistent effort
matter more in the long run. Hard work not only leads to achievements but also
helps us grow and improve.
cdac@SHRIRAM:~/LinuxAssignment$ cat output.txt
HARD WORK IS THE FOUNDATION OF SUCCESS.
IT MEANS STAYING DEDICATED, PUSHING THROUGH CHALLENGES, AND PUTTING IN THE EFFORT
EVEN WHEN THINGS GET TOUGH. WHILE TALENT HELPS, PERSISTENCE AND CONSISTENT EFFORT
MATTER MORE IN THE LONG RUN. HARD WORK NOT ONLY LEADS TO ACHIEVEMENTS BUT ALSO
HELPS US GROW AND IMPROVE.
cdac@SHRIRAM:~/LinuxAssignment$ |
```

Ans-f ->

1. Use **nano** command to create a file named duplicate.txt and put some repetitive textual content in it.
2. Use **sort duplicate.txt** command to sort the contents of duplicate.txt file and use **uniq** command in conjugation with it to get the result as distinct lines of content. **uniq** only removes **consecutive** duplicate lines.

```
cdac@SHRIRAM:~/LinuxAssignment$ cat duplicate.txt
apple
banana
apple
orange
grape
banana
kiwi
orange
mango
grape
apple
kiwi
cdac@SHRIRAM:~/LinuxAssignment$ sort duplicate.txt | uniq
apple
banana
grape
kiwi
mango
orange
cdac@SHRIRAM:~/LinuxAssignment$
```

Ans-g ->

1. Create a file named fruit.txt using **nano** command and put some fruit names repetitively in it.
2. Use the command **sort fruit.txt | uniq -c** to display the name of all fruits distinctly along with their frequency of occurrence. -c counts and displays the occurrences of each unique line.

```
cdac@SHRIRAM:~/LinuxAssignment$ cat fruit.txt
apple
orange
kiwi
apple
banana
watermelon
dragon fruit
pear
mango
banana
orange
dragon fruit
mango
strawberry
kiwi
kiwi
blueberry
rasberry
grapes
watermelon
melon
apple
kiwi
pear
cdac@SHRIRAM:~/LinuxAssignment$ sort fruit.txt | uniq -c
  3 apple
  2 banana
  1 blueberry
  2 dragon fruit
  1 grapes
  4 kiwi
  2 mango
  1 melon
  2 orange
  2 pear
  1 rasberry
  1 strawberry
  2 watermelon
cdac@SHRIRAM:~/LinuxAssignment$
```
